Mashro3ak | مشروعك

A smarter way to support Jordan’s home-based businesses

Team Anchor RHL · AI QUEST 2026 · Al Hussein Technical University

next.society()

Daily operational friction.

- Home-based sellers often work with limited time, budgets, and tools
- Product and order details can be difficult to keep organized manually
- Delivery costs can take a meaningful share of a small seller’s revenue
- Nearby customers may be served through separate trips

Mashro3ak challenges

When every order is handled alone

- **Sellers spend time coordinating orders instead of growing their business**
- **Repeated delivery trips can add cost and operational effort**
- **Customers and sellers lack a simple shared view of local order coordination**

Hoew the seller work with delivery

- Seller organizes products and records customer orders
- Orders are grouped by delivery destination
- The platform identifies nearby orders as candidates—not guaranteed matches
- Seller or delivery partner reviews a proposed plan
- Delivery decisions remain grounded in available, verified data

Concept illustration · not a live product screenshot

A clear distinction: vision vs. current build

- Current repository: a minimal API scaffold with a health-check endpoint
- Not implemented in this codebase: product and order management, persistent business data, delivery grouping, mapping, or machine-learning models
- Mashro3ak’s platform capabilities are project goals, not demonstrated prototype features yet
- This presentation makes no claim of live functionality or measured results

Impact to pursue and measure

- Make digital business tools more accessible to small local sellers
- Help entrepreneurs manage day-to-day operations more efficiently
- Test whether suitable order grouping can lower delivery effort or cost
- Evaluate whether coordinated trips reduce unnecessary travel
- Measure seller experience, delivery cost, and distance before making impact claims

Make local entrepreneurship easier to grow

Mashro3ak brings sellers, orders, and delivery coordination into one community-focused vision.
